Unimodular gravity and the problem of time

Benjamin Shlaer

Tufts University

Abstract General relativity can be minimally modified by treating the cosmological constant as a dynamical degree of freedom. This theory cannot be distinguished from general relativity at the classical level, but quantum mechanically the theory provides insight into the problem of time, the measure problem, and the black hole information paradox.

Seminar Room, Dept. of Theoretical Physics, Corridor 4.-2.

Wednesday, June 18th, 2014

Time:11:40
